

Carter Set to Debut All-new Parcel Conveyor at MODEX 2022

Carter Intralogistics is happy to officially announce the newest addition to its growing list of Conveyance Technologies: **CarterParcel™**.

CarterParcel™ is a Belt-Over Slider Bed AC Conveyor designed to match the rapidly growing demands of the parcel industry. It's heavy-duty, cost-effective, and built to move heavier loads over longer distances on a single drive motor. Common applications for parcel conveyor include transporting materials over long distances; hard-to-convey products like blister packs, envelopes, and bags; heavy loads over long distances; and any product over inclines and declines. It's best-used for long transport or high-speed sortation and can be found in large distribution centers, full case pick modules, assembly lines, product inspection, order picking, and order packing operations.

All system components for CarterParcel™ are completely modular. This provides increased adaptability in system design and allows for easier adjustments to existing layouts — a critical feature in the new age of flexible warehouses. CarterParcel™ and our connected partner network feature a full suite of belted parcel conveyor options including: straights, inclines, curves, merges, diverts, and sortation systems.

See it live at MODEX

We're debuting this brand-new parcel conveyor as part of our MODEX booth display. Be sure to drop by between March 28th through 31st to be the first to see it in action. Better yet, schedule a meeting
